

# XenStation Re-install TODO

## 1. Base Installation

- Install NixOS 26.05
- Clone /etc/nixos from Git
- Verify flake.nix is present
- Run initial nixos-rebuild switch --flake .#xenstation
- Reboot

## 2. Verify Boot Configuration

- Confirm systemd-boot timeout is 0
- Verify silent boot
- If needed: sudo bootctl set-timeout 0

## 3. NVIDIA

- Verify driver loads
- RTX 4090 detected
- CUDA working
- nvidia-smi works
- Keep hardware.nvidia.open = true

## 4. Blender

- Verify binary Blender installed
- CUDA device visible
- RTX 4090 selectable
- No source build occurs

## 5. OBS

- OBS launches
- NVENC H.264 available
- Recording supports HEVC and AV1
- Virtual Camera works
- Move Transition and VKCapture plugins loaded
- Keep obs-studio.override { cudaSupport = true; }

## 6. Virt Manager / QEMU

- libvirtd running
- virt-manager launches
- LIBVIRT\_DEFAULT\_URI=qemu:///system

- Storage pools vm-images and vm-isos exist
- Windows ISO and VirtIO drivers available

## **7. KDE Configuration**

- Restore ~/.config and ~/.local/share if required
- Verify theme, panels, shortcuts, Dolphin, wallpaper and fonts

## **8. LG TV / OpenHue**

- Review remaining warnings and determine whether configuration is needed

## **9. Btrfs Snapshots**

- Design declarative snapshot solution
- Automatic snapshots
- Cleanup policy
- Restore workflow

## **10. Backups**

- Verify home, VM and configuration backups
- Test restore procedure

## **11. Flatpak / Bazzite Cleanup**

- Confirm no leftover Flatpak services or RPM remnants

## **12. Git**

- git status
- git add .
- git commit
- git push

## **Future Improvements**

- Steam/GameScope optimisation
- Declarative Plasma configuration
- Backup automation
- Container tooling
- Development environment improvements

## **Lessons Learned**

- Use blender-bin to avoid local Blender builds.
- Keep OBS with cudaSupport enabled.
- Current NVIDIA open driver configuration works.
- Use bootctl set-timeout 0 if silent boot is lost after reinstall.

## High Priority

- Implement Btrfs snapshots
- Review LG TV/OpenHue warnings
- Continue declarative system polish
